- ♦ Un brote se define como 3 o más casos probables que ocurren dentro de una área geográfica definida (municipio o distrito) durante un período de 30 días
- \* Referente a los casos bajo investigación
- Sin información
- ♣ Durante 1994, el país no investigó los casos reportados de enfermedades febriles eruptivas. Entonces, para propósito de vigilancia, todos los casos fueron clasificados como confirmados.

♦ Un brote se define como 3 o más casos probables que ocurren dentro de una área geográfica definida (municipio o distrito) durante un período de 30 días  
 \* Referente a los casos bajo investigación  
 - Sin información  
 \* Durante 1994, el país no investigó los casos reportados de enfermedades febriles eruptivas. Entonces, para propósito de vigilancia, todos los casos fueron clasificados como confirmados.
