Update on West Nile Virus (WNV)

This week, 450 new cases of WNV infection in 27 states have been reported to the Centers for Disease Control and Prevention of the United States (CDC) (see Figure 1). At the moment, a total of 6,957 human cases of WNV infection and 149 deaths have been reported. The states with the highest number of cases reported are Colorado (2,170), Nebraska (1,108), and South Dakota (930). Demographic data is available for 6,842 cases (98%), with results showing 3,621 cases among males (53%). The average age was 47.

This year, 10,172 dead birds with WNV infection have been reported from 42 states, the District of Columbia and New York City. In horses, 3,087 infections have been reported in 38 states. A total of 6,421 positive mosquito pools have been reported in 38 states, the District of Columbia, and New York City.
