IS4H KNOWLEDGE CAPSULES

What are the drivers of information architecture in public health?

- Typically, an organization will initiate their information architecture or re-architecture in response to one or many of the stimuli seen on the right.
- Information architecture allows organizations to understand and enhance their information storage and information-related processes; therefore, it should be considered as a part of a solution to a part of a situation (or a problem), as well as many more.

- Artificial Intelligence in Public Health
- Data Governance in Public Health
- Information Architecture
- Interoperability in Public Health
- Technology Readiness
