

Proposal for the Development of a  
Regional Agenda for Hospitals in Integrated  
Health Service Delivery Networks  
EXPERTS MEETING  
Barbados, October 24 – 25, 2012

# Integrated Health Services Towards Universal Coverage

Hernan Montenegro  
Health Systems Adviser  
Department for Health Systems Policies & Workforce

World Health  
Organization

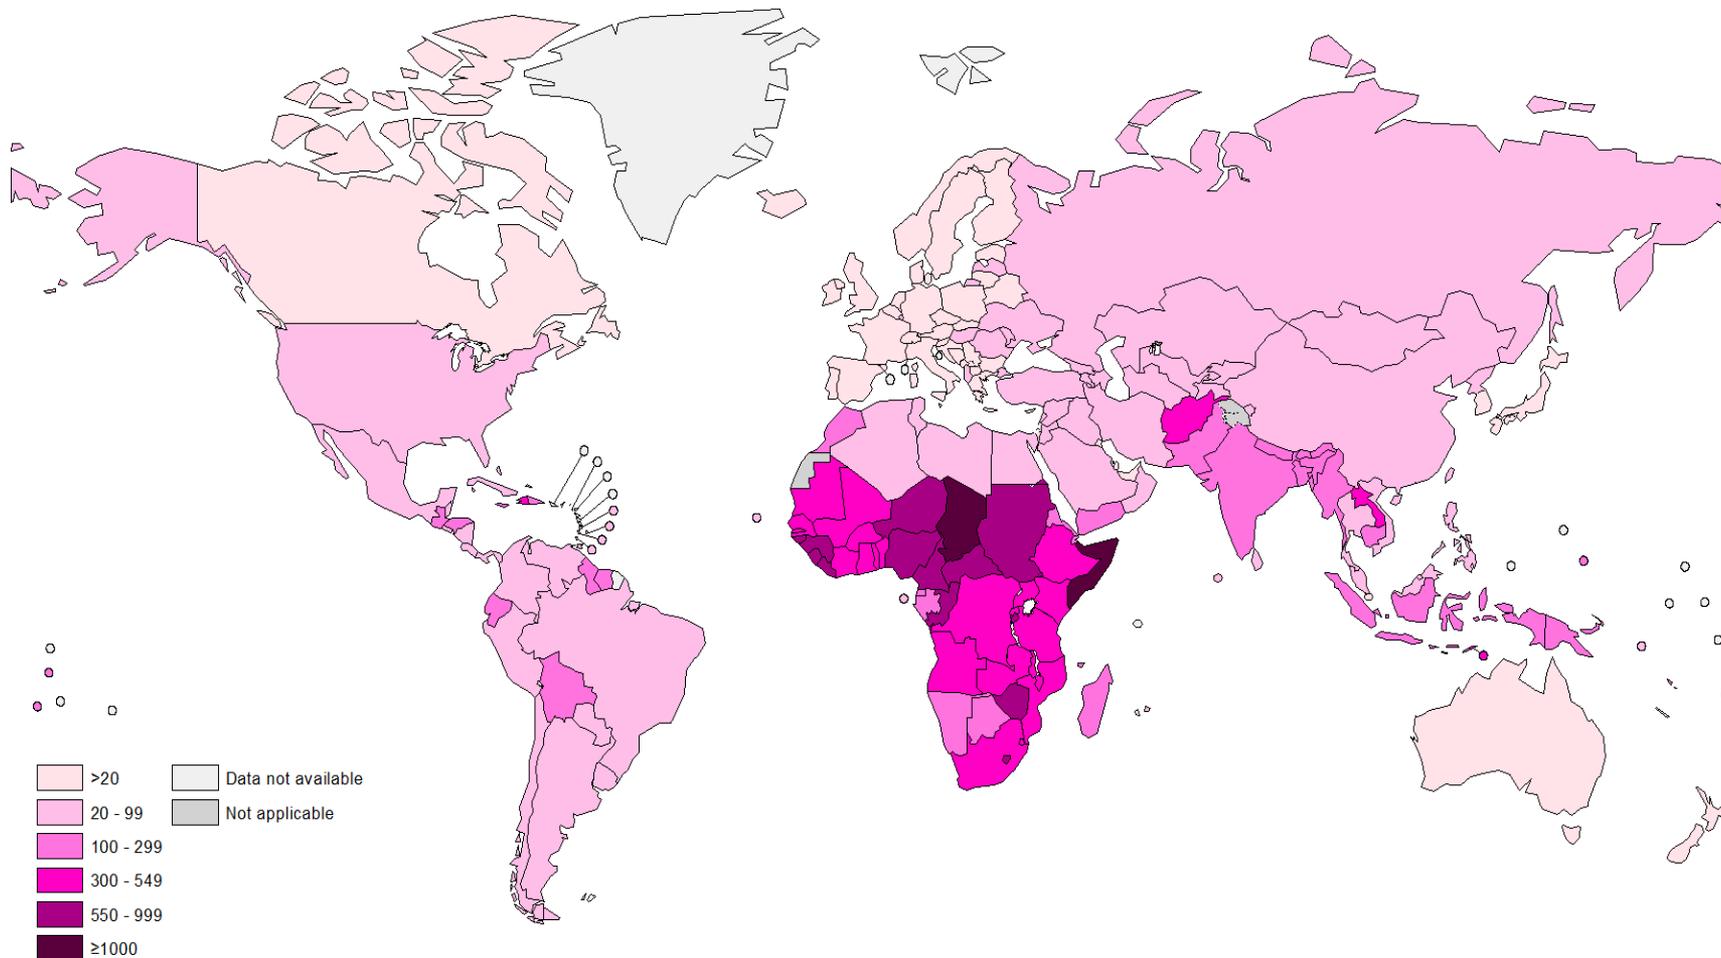

World Health  
Organization

# Content

---

- Coverage challenges around the world
- The problem of fragmented health care
- The renewal of PHC, including the push for UHC, people-centered and integrated care
- Hospitals: challenges and importance in supporting the above agenda

# Maternal mortality ratio (per 100 000 live births), 2010

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement.

# One view of the challenge: millions miss out on needed health services

## Percentage of Skill Birth Attendants

## ■ SKILLED BIRTH ATTENDANT (SBA) *at delivery*

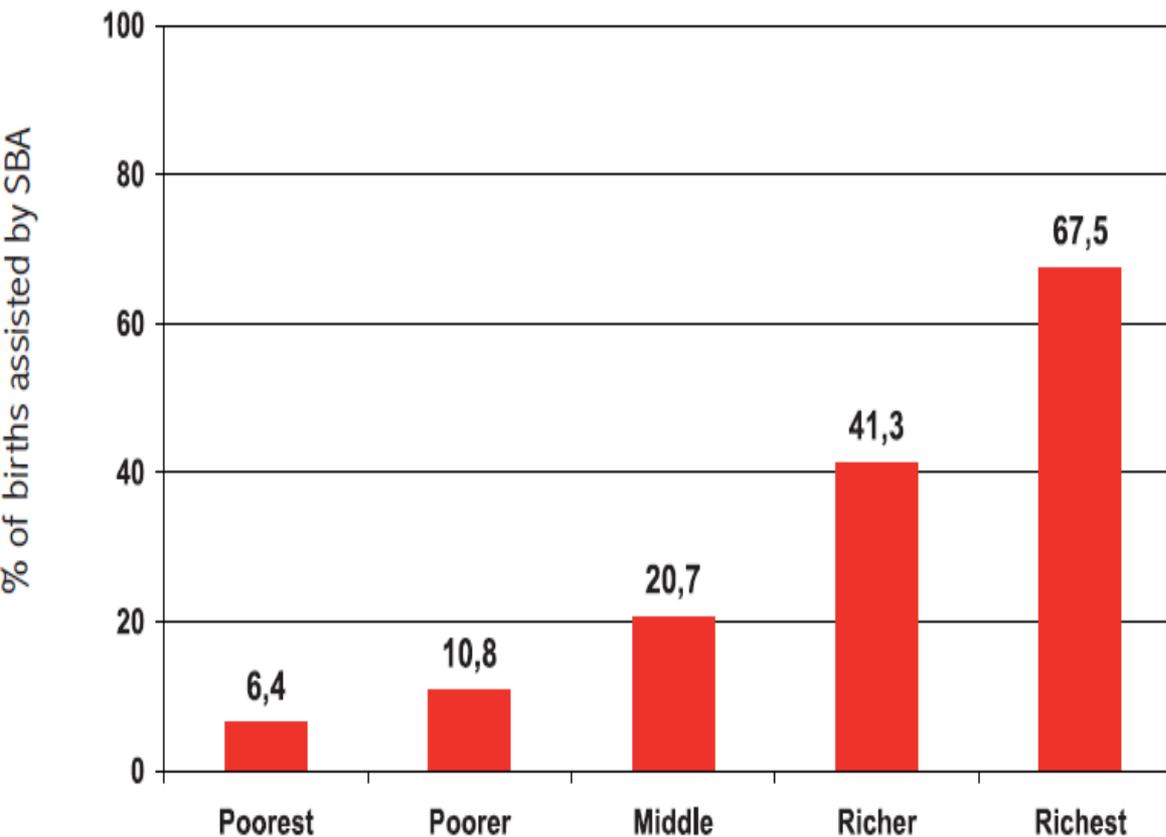

### Utilization of services

Three quarters of all maternal deaths occur during delivery and the immediate post-partum period. One of the critical interventions for safe motherhood is to ensure skilled care provided by skilled professionals during pregnancy and childbirth.

In Haiti, the latest survey in 2005 showed that approximately 26% of births were assisted by SBA. While 66% of births were reported to occur in rural areas, of those, approximately 15% of births were assisted by SBA.

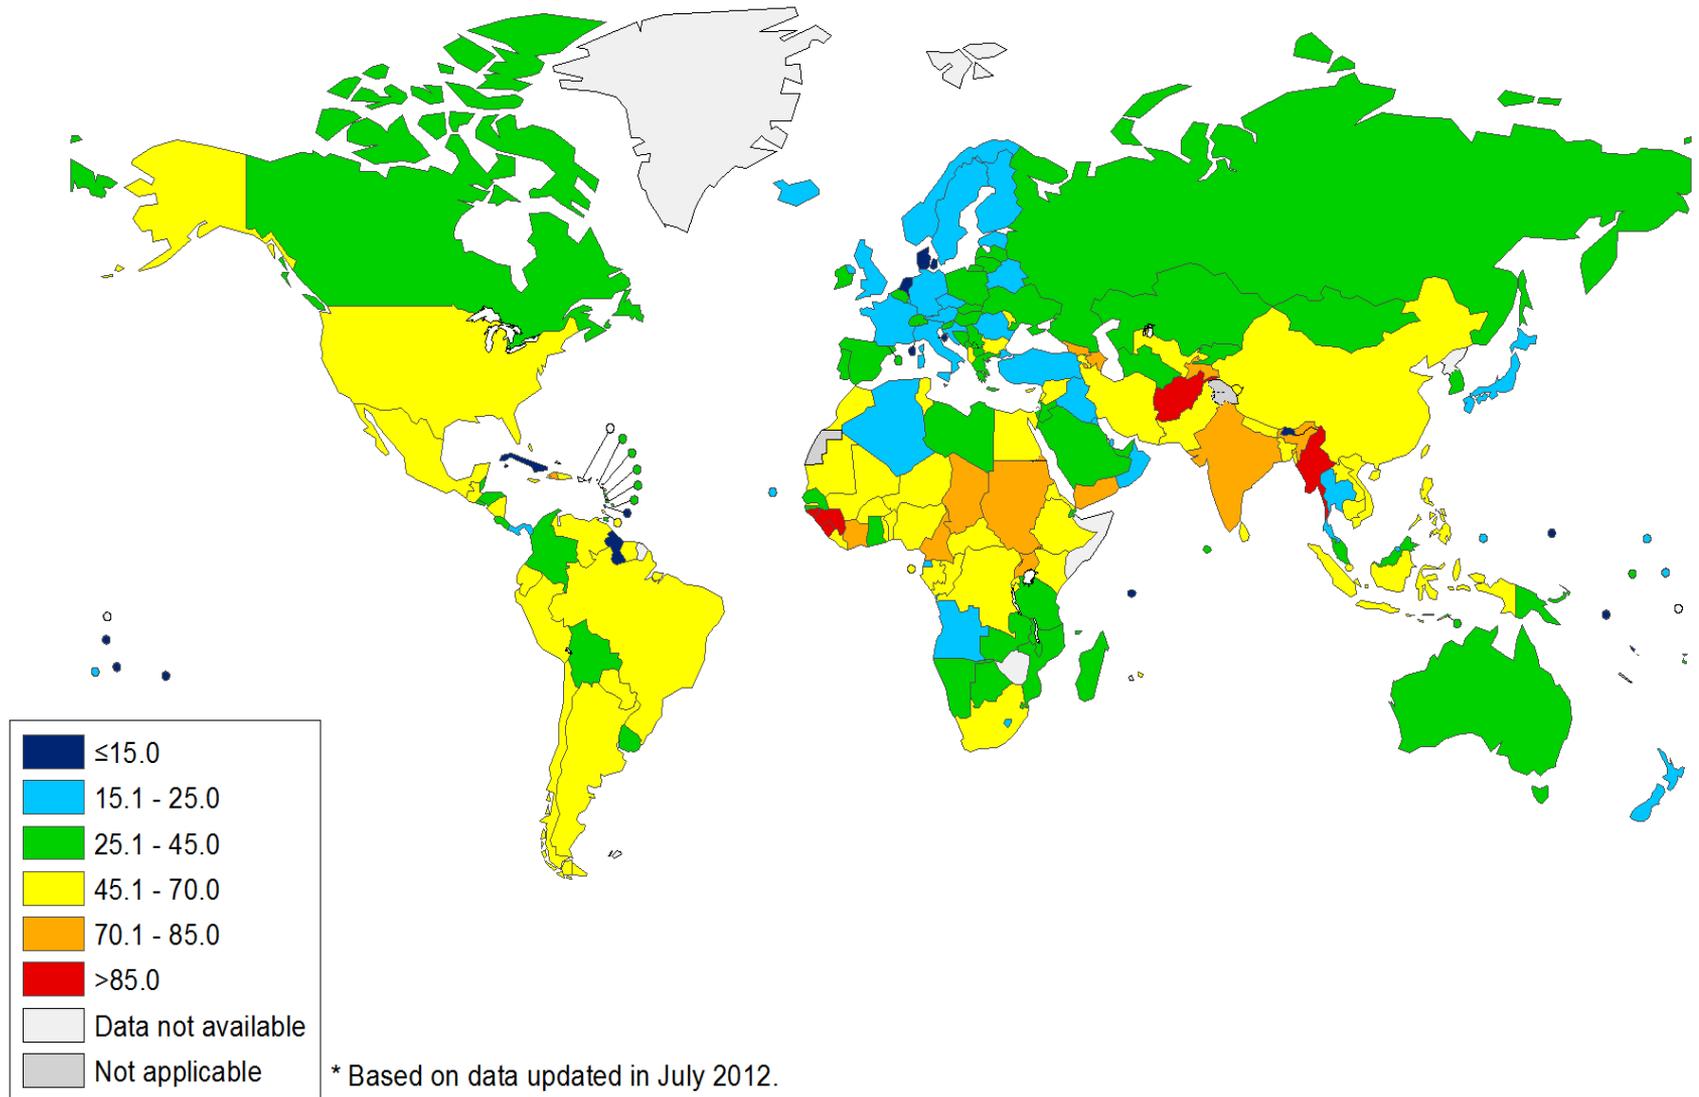

## Utilization of services by wealth quintile (2005/06)

Women's wealth status is one of the determinants of receiving skilled care. Women at the poorest situation had approximately 10 times less access to skilled care compared to their richest counterparts.

**LACK OF  
HUMANITY**

**CROWDED**

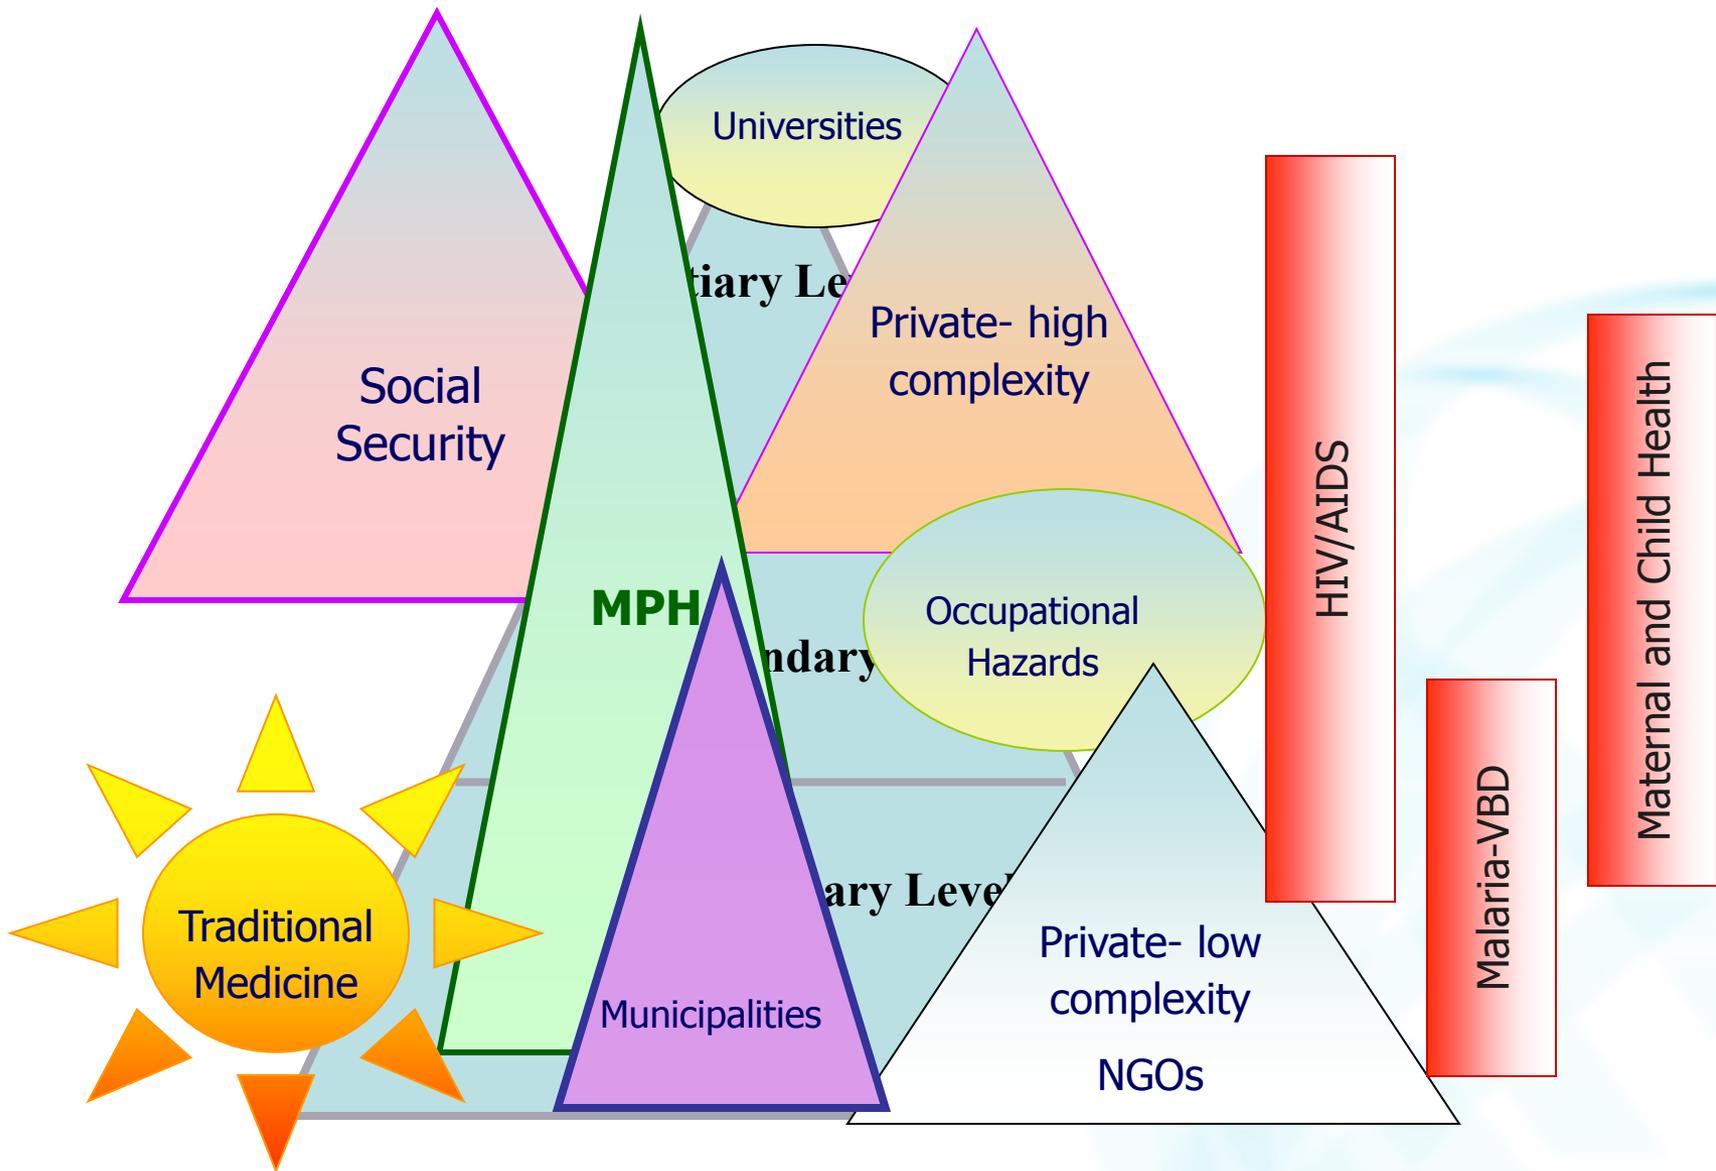

**COMMUNITY  
NEEDS**

**LACK OF  
INTEGRATION**

# Fragmentation of Health Services

**Fragmentation of Health Services**

**Poor Health Services Performance**

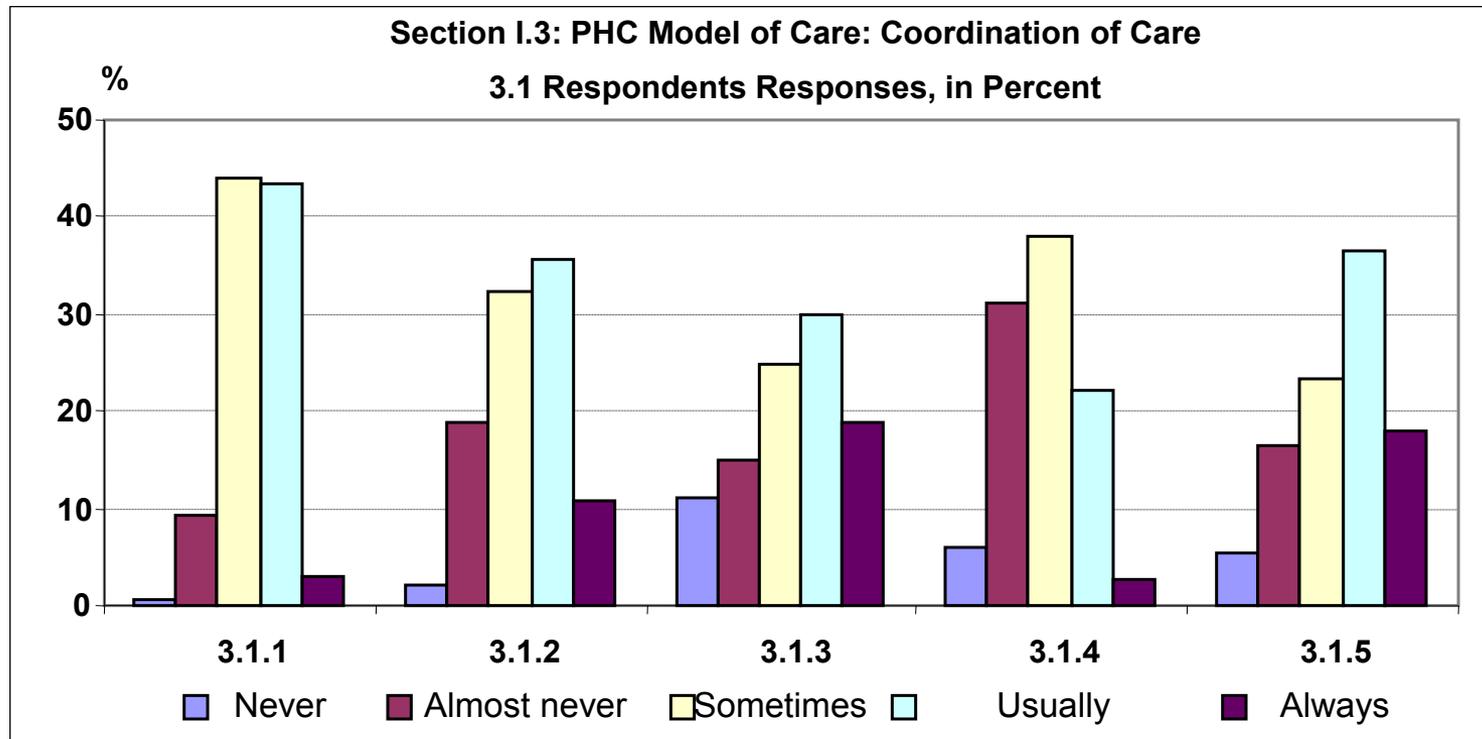

- Access difficulties
- Low technical quality of services
- Inefficient resource use
- Increased production costs
- Low user satisfaction

**Other causal factors of poor system performance**

(e.g. insufficient funding, health authority's weak steering capacity, lack of qualified human resources, etc.)

# Model of Care: Coordination of Care

3.1.1 Are patients seen by the same provider (doctor/health team) whenever they consult?

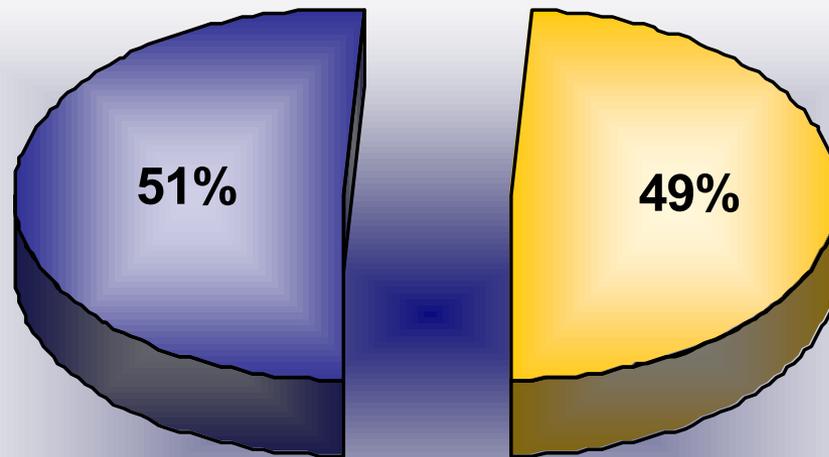

3.1.2 Is there an appointment and follow-up system, including arranging home visits by the health team?

3.1.3 Is assigning people from a geographical area to lists or registries with a specific PHC provider or provider group encouraged?

3.1.4 Does a good referral and counter-referral system based on case complexity normally function for patients?

3.1.5 Is there a policy that enables ensuring that PHC facilities are regularly covered by physicians or nurses?

# % of hospitalized patients according to most appropriate site of care

■ Primary care ■ Non-primary care

# Pressure for Change on Health Systems

Changes in demand

Changes in supply

Broad social changes

Demographics

Epidemiology

The public's expectations

Technology and knowledge

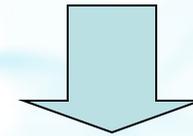

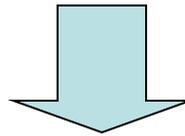

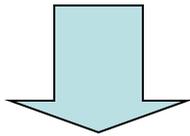

Workforce

Financial pressure

Globalization

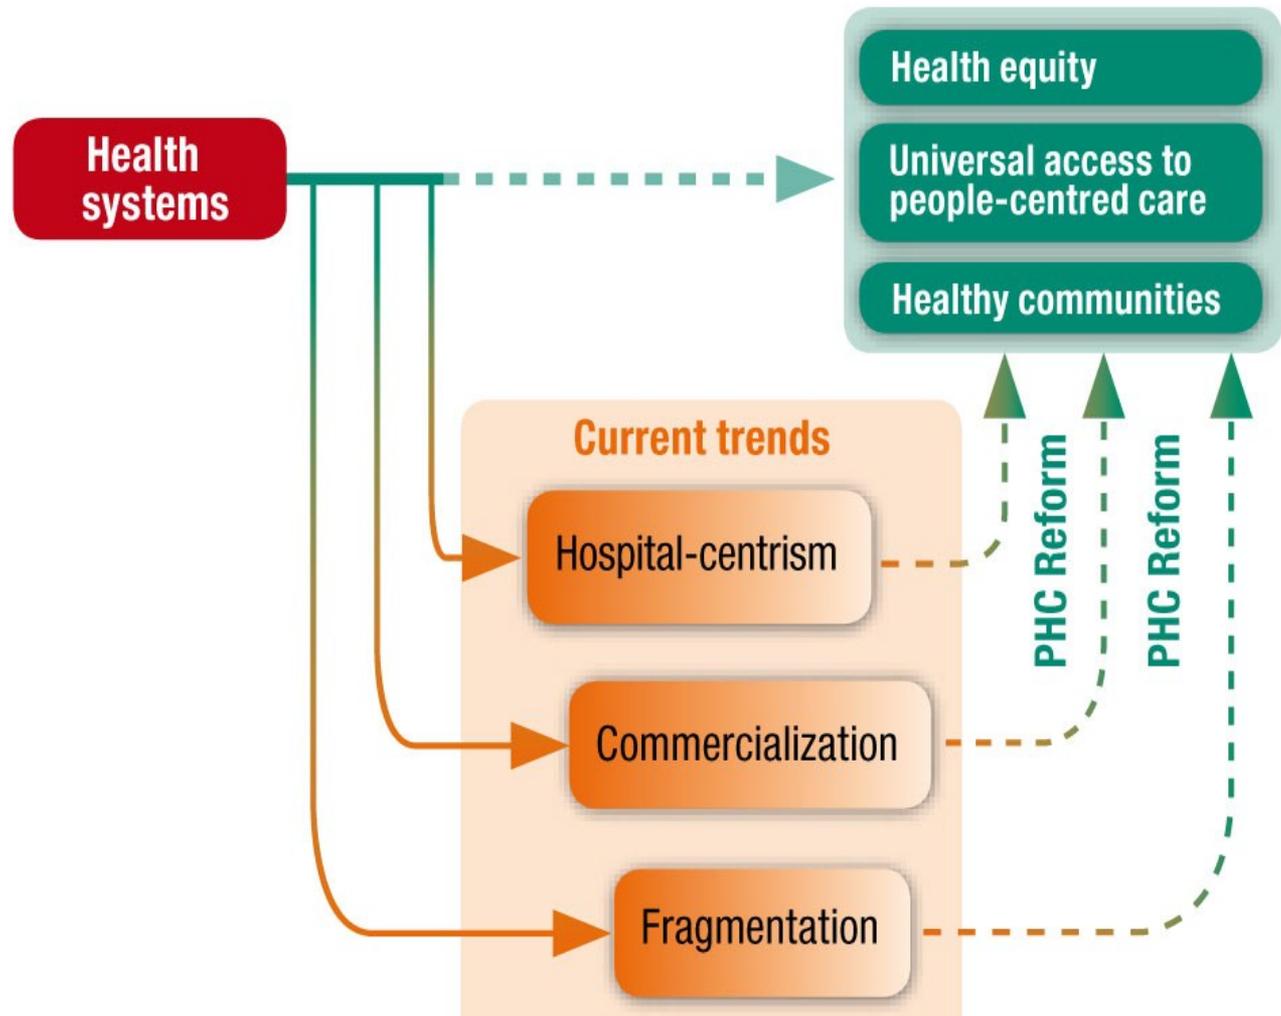

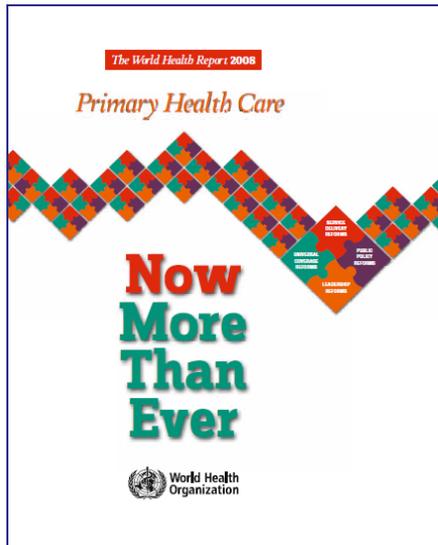

Government reforms

Sectoral reforms

Health Services

# Need for PHC reforms

Source: WHO, Primary Health Care- Now More than Ever, World Health Report, 2008

**UNIVERSAL  
COVERAGE  
REFORMS**

to improve  
health equity

**SERVICE  
DELIVERY  
REFORMS**

to make health systems  
people-centred

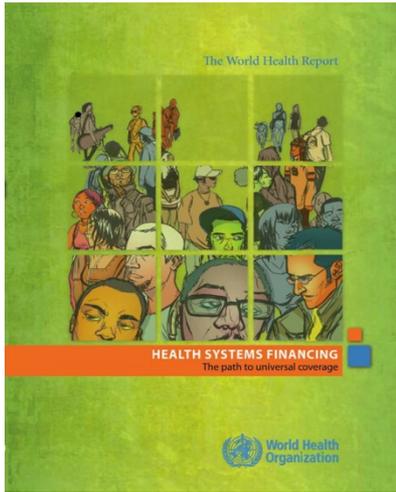

**LEADERSHIP  
REFORMS**

to make health  
authorities more  
reliable

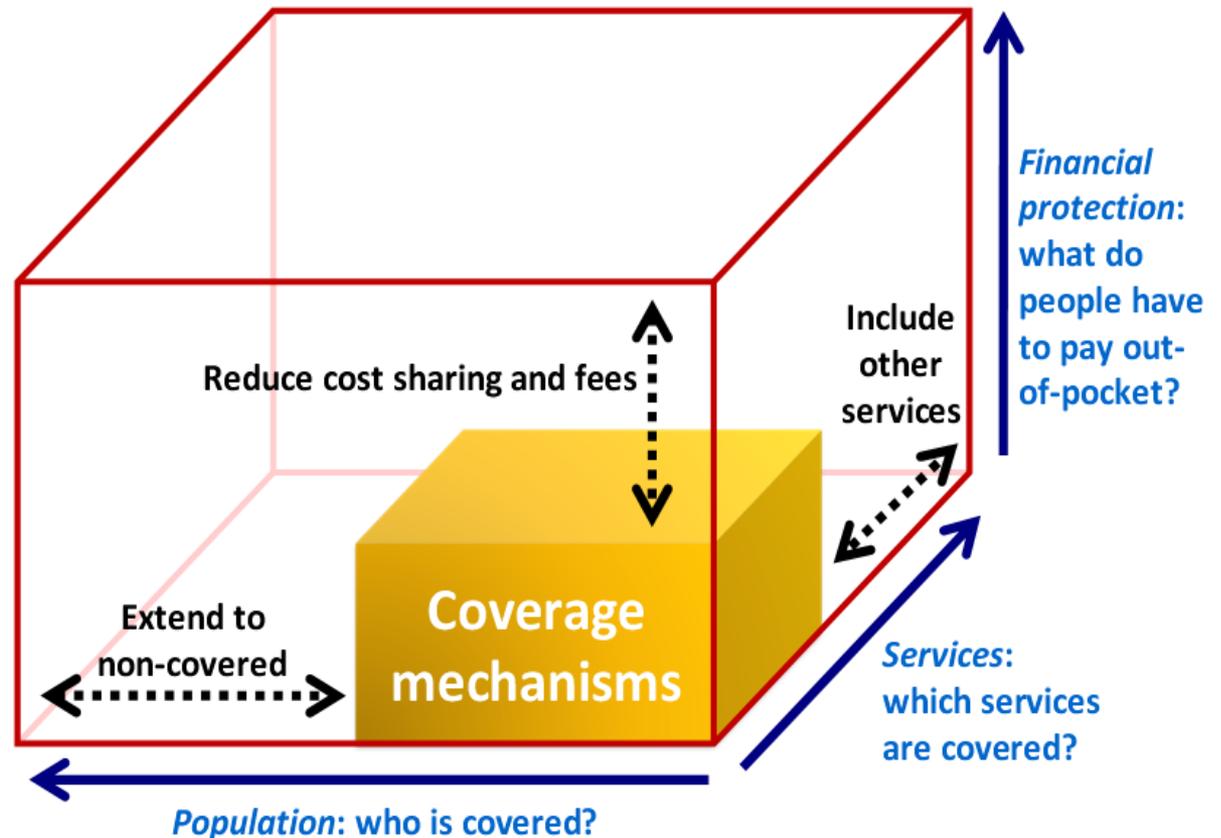

**PUBLIC POLICY  
REFORMS**

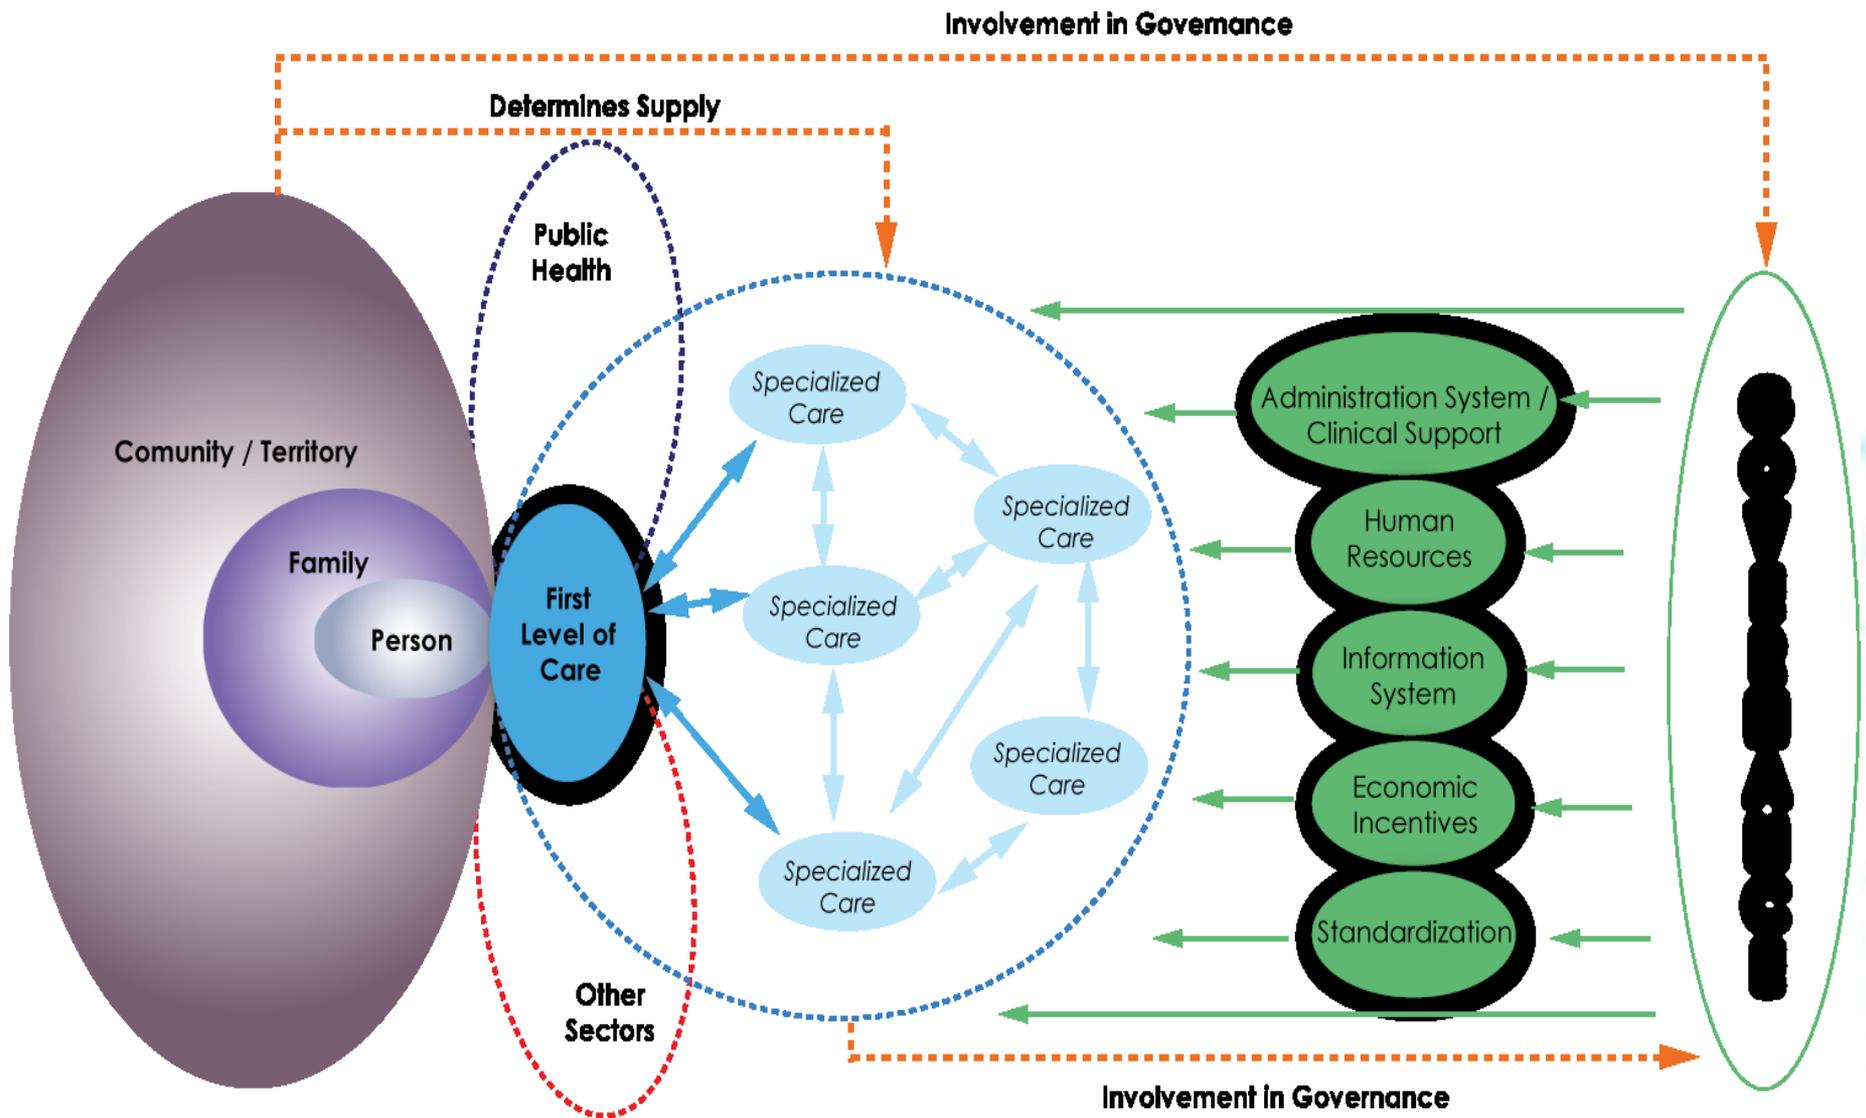

to promote and  
protect the health of  
communities

# Three dimensions (policy choices) of Universal Coverage as portrayed in WHR

## Towards universal coverage

**Context:** type of health system, funding level, legal and regulatory framework, health authority's steering capacity, availability of human, physical and technological resources, etc.

# Hospital Functions

## Patient Care:

- Inpatient care, ambulatory & day-admission
- Emergency & elective
- Rehabilitation

## Teaching:

- Vocational
- Pre-graduation
- Post-graduation
- Continuing education

## Research:

- Basic research
- Clinical research
- Health services research
- Educational research

## Support to rest of services network:

- Referrals
- Professional leadership

## Employment:

- Hospital personnel
- Hospital providers of goods & services

## Social:

- Legitimacy of State
- Political symbol
- Provider of social assistance
- Basis of medical professional power
- Community pride

# Public Hospitals: key challenges

- Poor performance in terms of access, efficiency, clinical effectiveness, safety & user satisfaction
- High costs
- Under funded, high debt
- No accountability for results
- Hospital-centrism: inpatient, curative & fragmented care
- Weak coordination with rest of service providers
- Inappropriate admissions
- Directors/managers lack leadership & managerial competencies

# Hospital reforms: Consistent with UHC, PCC and ISD?

- Governance:
  - Management autonomy\*
  - Decentralization to local government
  - Differentiating executive from advisory functions
  - Community & health personnel participation
  - Professionalization of executive function
- Financing:
  - Separation of functions
  - Management agreements
  - Contracting out with the private sector
  - New payment systems\*
  - Market competition, simulation\*
  - Private financing, cost-recovery\*

# Hospital reforms: Consistent with UHC, PCC and ISD?

- Service delivery:
  - Building new hospitals, size of hospitals (?)
  - Closing of hospitals, mergers, reducing hospital beds (?)
  - Hospital substitution, diversification:
    - Ambulatory surgery
    - Day hospital (rehabilitation, psychiatry, etc.)
    - Patient Progressive Care
    - Interventionist radiology
    - Accelerated discharge programs
    - Home care, hospice, nursing homes
    - Telemedicine
    - Emergency: Pre-hospital care, Primary care emergency
  - Focus on quality of care and clinical governance
  - Integration of services

# The Role of Hospitals in Today's Health Systems, Geneva, 2010: Key Issues:

1. Clarifying the **role and function** of hospitals in the health system
2. **Political dimensions** and expectations towards hospitals
3. **Hospital isolation** in the face of blurring demarcations
4. **Linkage** between hospitals and other levels of the health system
5. Cost and benefit of **technological progress**
6. Data to measure hospital **performance** in relation to population outcomes
7. **Universal coverage** and accessibility
8. Hospital **financing** within overall health spending
9. Hospital **governance** and autonomy
10. The **legal framework** within which hospitals operate
11. **Human resources**
12. Involvement of **private hospital** actors
13. Hospitals in a **global health market** place
14. Hospitals and the **wider economy**
15. Interest by **donors and partners**

# Hospitals: Some key themes for the future

- Focus on population health: coverage and equity
- Systemic (Systems) vision
- Integration and coordination of care
- Continuity of care and people-centered care
- Adequate levels of self-management and clinical governance
- Patient and personnel safety
- Results orientation and accountability
- Caring for the environment (Green Hospital)

# ISD for UHC Strategy: preparatory work

- Conceptual and analytical Framework
- Database of WHO and other international development agencies production on service delivery
- Drivers of change and future trends
- Future scenarios
- Country settings
- Evidence gathering on policy options
- Case Studies
