There is still work to be done

1.4 million children in the Region of the Americas **do not** complete their basic vaccination schedule

Vaccination Week in the Americas

Each April since 2003, Vaccination Week in the Americas (VWA) draws attention to the work of national Immunization programs and their efforts to improve access to life-saving vaccines.

More than **640 million** people have been vaccinated under the umbrella of this initiative.

In subsequent years, other regions of the world have joined forces to create similar initiatives and the first World Immunization Week was celebrated in 2012.
