

Brazil - Curitiba (Ages 13-15)

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Brazil - Curitiba GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components Brazil - Curitiba could include in a comprehensive tobacco control program.

The Brazil - Curitiba GYTS was a school-based survey of students in 7th and 8th grade of elementary school and 1st grade of high school conducted in 2002.

A two-stage cluster sample design was used to produce representative data for Brazil - Curitiba. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 92.0%, the class response rate was 100.0%, the student response rate was 82.9%, and the overall response rate was 76.2%. A total of 1,161 students aged 13-15 participated in the Brazil - Curitiba GYTS.

Prevalence

- 43.5% of students had ever smoked cigarettes (Boy = 35.6%, Girl = 47.9%)
- 15.0% currently use any tobacco product (Boy = 12.6%, Girl = 16.0%)
- 12.6% currently smoke cigarettes (Boy = 9.1%, Girl = 14.4%)
- 3.4% currently use other tobacco products (Boy = 3.9%, Girl = 2.9%)
- 19.3% of never smokers are likely to initiate smoking next year

Knowledge and Attitudes

- 13.4% think boys and 10.1% think girls who smoke have more friends
- 3.5% think boys and 2.7% think girls who smoke look more attractive
