

F IMPLEMENTATION OF THE REGIONAL STRATEGY AND PLAN OF ACTION FOR AN INTEGRATED APPROACH TO THE PREVENTION AND CONTROL OF CHRONIC DISEASES, INCLUDING DIET, PHYSICAL ACTIVITY AND HEALTH

Background

76. In 2006, the Directing Council adopted Resolution CD47.R9, *Regional Strategy and Plan of Action for an Integrated Approach to the Prevention and Control of Chronic Diseases, Including Diet and Physical Activity*. The resolution urges Member States to implement integrated policies and plans, guided by the Regional Strategy, and requests the Director of the Pan American Sanitary Bureau (PASB) to strengthen Member States' capacity to implement comprehensive, multi-sectoral approaches and strengthen or establish new partnerships. The Regional Strategy follows four lines of action: policy and advocacy, surveillance, health promotion and disease prevention, and integrated management of chronic diseases.

Update on Current Situation

77. Chronic diseases are now the leading cause of premature mortality and disability in the vast majority of countries in the Americas. About 250 million people of a total of 890 million (in 2005) in the Region suffer from chronic diseases, mainly cardiovascular diseases, cancer, obesity and diabetes. These particularly affect low- and middle-income populations, with an estimated 139 million (25%) of persons >15 years of age being obese (BMI>30) in 2005, and rapidly increasing to reach an estimated 289 million (39%) by 2015.¹⁵ There is also a growing concern over the rapid increase of obesity in children and adolescents. The toll in human suffering and economic cost from chronic diseases is enormous. Yet, these diseases are preventable and can be controlled through public policies, risk factor reduction, and the provision of health services for screening, early detection, and disease management. For example, the implementation of basic strategies to reduce tobacco use by 20%; salt intake by 15%; and to use simple multidrug regimens for patients with high-risk cardiovascular disease, could prevent more than 3.4 million deaths from chronic diseases in the Region over 10 years at reasonable cost.¹⁶

78. Since the Directing Council adopted the resolution on chronic diseases in 2006, almost all Member States have made substantial progress in implementing national plans for their national chronic disease programs as noted in the End-of-biennium Report

¹⁵ Estimated from WHO Info Base. It can be consulted at <https://apps.who.int/infobase/report.aspx>.

¹⁶ Gaziano T, et al. Scaling-up interventions for chronic disease prevention: the evidence. *Lancet*, 2007, 370: 1939-46; extrapolated to countries of Latin America and Caribbean countries.

presented to the Executive Committee (see Table 1). In most cases, countries reported exceeding the Regional Expected Result indicators of the Strategic Plan related to chronic diseases.

79. During the 2008-2009 biennium, PAHO mobilized approximately US\$ 21 million of the \$28 million budgeted to support Strategic Objective 3¹⁷ (non-communicable diseases (NCDs)). At the international level, the resource picture for (NCDs) is at best mixed.¹⁸ For example, in 2008 the Bill and Melinda Gates Foundation and Bloomberg Philanthropies committed \$500 million to help countries improve tobacco control. World Bank lending between 1995 and 2005 was more than \$300 million for NCDs and injuries. The level of Official Development Assistance (ODA) commitment to NCDs is unknown, but preliminary estimates are 1-2% of total. Most international development agencies find it difficult to support NCDs because they are not included in the Millennium Development Goals (MDGs). At the same time, some bilateral technical or donor agencies are investing, such as the Spanish International Cooperation Agency for Development (AECID), Centers for Disease Control and Prevention (CDC), and Public Health Agency of Canada (PHAC). However, efforts to increase the level of attention current resources are needed, given the huge burden.

Policy and Advocacy

80. An assessment of the status of chronic disease responses in the Region shows that 26 countries in Latin America and the Caribbean reported making program-related investments in chronic diseases, including having a national focal point in the ministry of health, training personnel, and creating intersectoral partnerships. Compared to 2005, when 63% of countries had a national focal point/unit and budget, all countries now report having such. However, more efforts are needed since only 29 countries are implementing a national plan for NCDs. In 2008, resolutions on diabetes and obesity, and on cervical cancer prevention and control, were also approved by the Directing Council. Many countries have also taken important steps to include NCDs in social protection packages, including medicines.

81. The CARMEN Policy Observatory is a joint initiative between PAHO and the PAHO/WHO Collaborating Center on Non-communicable Disease Policy of Public Health Agency of Canada (PHAC). The Observatory is a platform for the network of American countries and institutions engaged in the systematic analysis and monitoring of chronic disease policies

¹⁷ Strategic Objective 3: To prevent and reduce disease, disability and premature death from chronic noncommunicable conditions, mental disorders, violence and injuries.

¹⁸ WHO. NCDnet Working Group on Innovative Resourcing Background Paper. Geneva 24 February 2010. www.who.int/ncdnet.

82. A compilation of Latin American legislation on prevention and control of obesity, diabetes and cardiovascular diseases was produced in 2009 followed by an electronic publication. A similar compilation is under way for the English-speaking Caribbean countries and territories, as well as the drafting of guidelines to help in the up-grading of legislation when needed. A plan of work for the upgrading of legislation on the prevention and control of obesity in Latin America and Caribbean countries will begin in the second semester of 2010 with a regional meeting of legislators.

83. The economic, fiscal and welfare implications of the obesity epidemic were analyzed in a regional workshop held in 2009 with 10 countries and representatives from the Inter-American Development Bank and the World Development Bank. A regional study on economic burden was also started. The output will be used to engage policy makers from ministries of health and finance in a meeting in 2011 to increase support to address NCDs.

84. At the subregional level a special summit of the Heads of State of the Caribbean Community (CARICOM) on chronic diseases was conducted in 2007. This summit generated high-level commitment to advance policies and monitor implementation of the summit's declaration. CARICOM countries have also formally proposed a United Nations General Assembly Special Session (UNGASS) on chronic diseases for September 2011. RESSCAD/COMISCA¹⁹ adopted resolutions on chronic diseases and cancer, and developed an annual operation plan that encompasses seven activities on chronic diseases. MERCOSUR²⁰ has made the surveillance of chronic diseases a priority to guide policy and decision makers. Courses were conducted on policy analysis and development, with special reference to chronic diseases, in the Caribbean and Central America.

Surveillance

85. PAHO/WHO supports Member States in their efforts to strengthen their health information systems to monitor chronic diseases by providing guidance and tools for implementing the PanAm STEPS²¹ methodology; for the surveillance of risk factors; as well as with a standardized list of minimum indicators. Twenty seven target countries in

¹⁹ RESSCAD/COMISCA: *Reunión del Sector Salud de Centroamérica y República Dominicana/Consejo de Ministros de Salud de Centroamérica* (Meeting of the Health Sector of Central America and the Dominican Republic/Council of Ministers of Health of Central America).

²⁰ MERCOSUR: *Mercado Común del Sur* (Southern Common Market).

²¹ The PanAm STEPS approach to chronic disease adult risk factors surveillance was designed to help countries build and strengthen their capacity to conduct surveillance. It provides an entry point for low and middle-income countries of the Region to get started on chronic noncommunicable diseases surveillance. Similarly, Pan AM STEPS serves as a harmonizing tool to collect and display data throughout the Region in a unifying way.

the Region have defined the set of NCD core indicators. Thirteen target countries have established a system to collect these data using PAHO methodology and analyzing these data from the social determinants and gender perspectives. Discussion forums on NCD surveillance have been established through technical groups of the Common Market of the Southern Cone (MERCOSUR), through the Caribbean epidemiologists' network coordinated by CAREC, and for Andean countries with the support of the Andean Health Agency (ORAS). Twenty seven target countries have produced at least one report on the situation of NCDs or included it in the report of the health situation of the country. PAHO/WHO supports the collection and analysis of data disaggregated by sex, age, and ethnic origin, including the participation of users and producers from governments and civil society.

Health Promotion and Disease Prevention

86. Healthy diet, the promotion of physical activity, and tobacco control continue to be the pillars of the regional strategy. Most of these programs lack the needed human and financial resources. Ten countries report implementing multi-sector, population-wide approaches to promote risk factor reduction for chronic diseases.

87. A Trans-fat Free Americas Initiative was launched by PAHO in 2007 in collaboration with the private sector, which promotes regulations, guidelines and voluntary actions to eliminate trans-fats from processed foods. Such an initiative has the potential to reduce the population's risk for cardiovascular diseases.

88. The Dietary Salt Reduction Initiative with a target to reach 5g/person/day by 2020 to prevent cardiovascular disease in the Americas was launched in 2009. An expert group on salt reduction was created, outlining actions for governments, industry and civil society, while preserving the benefits of salt fortification programs. Argentina, Barbados, Canada, Chile, and the United States are among the countries that have put dietary salt reduction high on the agenda.

89. The creation, in July 2008, of the Pan American Alliance for Nutrition and Development makes it possible to implement comprehensive, intersectoral programs that are both sustainable and coordinated, within the framework of the MDGs. The Alliance addresses social determinants such as malnutrition and poverty as a way to prevent obesity and NCDs. The participation of civil society in issues such as food marketing to children and child obesity has increased significantly over the past five years, notably in Brazil, Canada, Chile, Mexico, and the United States.²²

²² Data was obtained during the AMRO consultation (Marketing of Food and Beverages to Children) and is based on country responses. No document has been released to the public on this consultation as yet.

90. Seventy-six cities of 14 countries²³ across the Americas have established *Ciclovías Recreativas*. Nine countries²⁴ have developed programs on Bus Rapid Transit, which contribute to reduce traffic congestion, reduce road-accidents and facilitate utilitarian and recreational physical activities. The Caribbean countries have all implemented Caribbean Wellness Day, emphasizing mass physical activity.

91. Twenty-seven countries have ratified the Framework Convention on Tobacco Control.²⁵ Ten countries have increased taxes on tobacco (Bahamas, Brazil, Colombia, Guyana, Jamaica, Nicaragua, Suriname, Trinidad and Tobago, and Uruguay). Six countries have national or subnational legislation banning smoking in public places and indoor workplaces.

92. PAHO is also promoting the concept of urban health as a means to address the needs of the most vulnerable, through urban planning that promotes safe spaces for physical activity and healthy eating habits, two important protective factors for the prevention of chronic diseases. World Health Day 2010 stimulated all the countries of the Region of the Americas to promote activities related to physical activity and healthy lifestyles. PAHO's programs on healthy schools and on healthy workplaces include attention to healthy diet, physical activity and other measures which support chronic disease prevention. A major objective of the WHO workers' health plan is healthy workplaces.

Integrated Management of Chronic Diseases and Risk Factors

93. PAHO, working closely with Member States, professional associations, and other partners has supported the development and implementation of evidence-based guidelines and protocols on the integrated management of chronic diseases, targeting cervical cancer, breast cancer, diabetes, and cardiovascular diseases. Currently, 18 countries report implementing integrated primary health care strategies to improve quality of care for persons living with chronic diseases. The Chronic Care Model to improve the quality of care delivered through primary health services for persons with chronic conditions has been promoted by PAHO and is being applied in 15 countries. A rapid assessment in 24 countries on disease management capacity showed the availability of guidelines or protocols for hypertension and diabetes in 23 countries (97%). Twenty (86%) have protocols for cancer, but a very low proportion have guidelines and protocols for weight control and physical activity. There are no policies for the access to some medications

²³ Argentina, Brazil, Chile, Colombia, Costa Rica, El Salvador, Canada, Ecuador, Guatemala, Honduras, Mexico, Nicaragua, Peru, United States.

²⁴ Brazil, Chile, Colombia, Canada, Ecuador, Guatemala, Mexico, Peru, United States.

and services, particularly for low-income groups. All countries in the Region have a list of essential medicines for chronic diseases.

94. The Central American subregion, through the support of AECID, has developed a list of essential medicines, mainly on cancer, for consolidated subregional procurement. Chronic diseases are associated with catastrophic family expenditure, which sharpens and deepens poverty. Access to treatment for low-income persons is hindered by 39-63% of the population having to pay full cost of basic medications for diabetes and hypertension.²⁶ Between 25-75% of basic procedures/tests, including blood glucose monitor, x-rays, mammography, cervical cancer smears, colonoscopy, lipid profile, and dialysis, are not mentioned in guidelines to address NCDs. They are available however in about 85% of the countries of the Region. Dialysis services are accessible in 83% of countries. It is estimated that around 40% of the population have to pay from their pocket an average of \$99 per dialysis session, or \$15,500 a year.

Strengthening Networks and Partnerships

95. The CARMEN network of national chronic disease program managers, WHO Collaborating Centers, and nongovernmental organizations, has been strengthened and expanded to 32 countries. Regional courses have been conducted under the CARMEN school, in collaboration with academic and technical institutions in evidence-based public health practice, social marketing, physical activity, and chronic disease care. In 2009, PAHO a multi-stakeholder Partners' Forum for Action on Chronic Diseases was established to serve as an instrument to engage the private sector and the civil society together with Member States, given that no one sector can solve the problem alone. This novel mechanism aims to leverage unique roles and capacities of each sector to take joint action to accomplish policy and environmental change to promote health and prevent chronic disease. Future meetings and activation are planned for 2010.

Actions for Improvement

96. Despite the major gains made by Member States on their national chronic disease programs, the attention and resources devoted to this public health issue are severely lacking, despite the enormous disease burden and economic costs. Member States, with PAHO's collaboration, should support a major effort to build competencies and capacity for all aspects of prevention and control of chronic diseases, including surveillance, policy analysis and development, tobacco control, healthy diets and physical activity, improved quality of disease management, and multi-stakeholder engagement and coordination mechanisms. Support from PAHO, its partners, and other sectors must be

²⁶ PAHO, National Capacity for the Management of Chronic Diseases in Latin America and the Caribbean. 2009.

harnessed to increase Member States' capacity to adopt evidence-based policy actions that can have the greatest impact, such as tobacco control, salt reduction, and policies that support healthy eating and physical activity. These interventions also involve scaling up access to medicines and quality health services for screening, early detection, and control of chronic diseases, especially cardiovascular disease and low-income populations. Member States and PAHO should continue to strengthen the capacity and competencies of health systems for integrated management of chronic diseases and risk factors, including patient self-care, with a focus on primary health care.

97. Efforts are needed to improve the quality and timeliness of health information to guide policy, planning and evaluation, especially risk factor information. Such efforts should be directed to gender-based analysis, and leveraging novel approaches/technologies to increase participation. PAHO and Member States should advocate for and support the UNGASS on NCDs. Technical cooperation between countries on successful practices and sharing of experiences on NCDs should continue to be actively pursued. No single institution or sector can tackle chronic diseases. Therefore, establishment of national intersectoral efforts, and partnerships and alliances is encouraged as a key strategy. The CARMEN Network and the Partners Forum can be an innovative resource to support this effort. Increase efforts to support Member States to review their legislation and norms for addressing chronic diseases, tobacco control, measures when necessary, including legislation on food marketing to children and child obesity with participation of the civil society.

**Table 1: Region-wide Expected Results (RER) Indicators
Target and List of Countries and Territories
Reporting Progress ²⁷**

RER Indicator No.	RER Indicator Text	Target 2009	Countries and Territories Reporting Progress
3.1.3	Number of countries whose health ministries have a unit or department for chronic noncommunicable conditions with its own budget	26	Argentina, Bahamas, Barbados, Bolivia, Brazil, Colombia, Costa Rica, Cuba, Chile, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, Saint Lucia, Suriname, Trinidad and Tobago, Uruguay, Venezuela
3.1.4	Number of countries where an integrated chronic disease and health promotion	10	Anguilla, Antigua and Barbuda, Argentina, Bahamas, Barbados, Belize, Bolivia, British Virgin Islands,
