Strategic Goal 3: Knowledge management and sharing

Academia & scientific community

Social participation

Knowledge Processes

Knowledge architecture

Networks

Strategic communications

Transparency and sound communication in an early stage can build trust in the system and facilitate contributions and cooperation across different sections of society. Communication and engagement with civil society and the public through mechanisms for active encouragement and transparent decision-making process.

Knowledge management and sharing policies, processes, infrastructure, tools, and skills strengthening as part of a learning organization framework.

The academic and scientific communities contribute to research and producing new knowledge in health.

Strategic tools and methodologies for supported decision-making. Public health communication strategy on national priority issues, as well as promoting (individual, social, and political) changes that lead to achievement and maintenance of health.

Knowledge management methodologies and mechanisms to improve decision-making, capture, share, and measure organizational knowledge.

Different types of networks implemented, such as: strategic and diplomatic networks of relations, thematic and knowledge networks, and social networks for community engagement.
